

Hi everyone,

My name is Vali, and i'm the head technician for Power Link Generator. I just want to go through the new features of the script, that we've just added.

First of all, version 3.0 offers the member, the possibility to have a bypass squeeze page and send directly to the sales page, or even to the order page from email promotions, articles.

This means that you track one url, which sets your affiliate variable, but the member is redirected to a page where you promote the same product (this is the page that the member sees.)

Another important step forward is the viral strip, which looks like a toolbar on the top or on the bottom of the window where the campaign loads. In this viral strip, there will be your affiliate link for power link generator. This way, you will make more money from commissions..

These are the two most important features. Another aspect we took care of, was the cloaked link which didn't set the affiliate variable until now. This means that you can use cloaked links, because now they will set the affiliate variable and keep the link cloaked.

If you use ClickBank as the page where the member is redirected, the ClickBank page will brake from any frames your campaign uses, so that campaign url will not stay cloaked !

Thank you for your time,
Vali
